

## Mitiaro SandFlies – Survey Report July 2013

Some notes for your information.

1. Cold season – There are are few but will not bite.
2. Warm season – Most areas on the island including on the reef about 5pm sandflies start eating.
3. Inland villages – Start early morning to 9am.
4. In the villages – Morning to 9am then 3pm start again to what ever time at night.
5. On the main road inland – The word plenty sometimes hard to drive by bike.
6. At picnic sites and around the island always hard to controll.
7. It goes to where lights are ( power lights ) therefore its better to shut the windows and to use 1 light outside.
8. Some people says, that candle lights are good because they attack the candle light and kill them selfs.
9. Whatever happens will let you know.

Liz, kia orana ae tika rai ko tena mapu ko te au ngai putuputu tena e aere ana te tangata tautai picnic e ka kite ia i reira te sandflies Kote aranui e aere ra ki uta tena au ngai katoatoa ,takapini ite enua a runga Katoa ite akau ite tautai ite aiai koia tikai te sandflies per ate roto i nukuroa nei koia tikai me tano tona taime. Tetai i roto tikai ite Oire ite matangi tai koia oki matangi na mua mai ite Ava koia tikai Thanks for now..
